

The **optomap** Retinal Exam

- ✓ **Is fast, easy, and comfortable**
- ✓ **May alleviate the need for dilation**
- ✓ **Provides a permanent record for annual review**

Early detection could help save your vision or your life.

An **optomap**[®] Exam gives us a panoramic image of the surface of your retina.

These images help your doctor assess the health of your eyes and check for conditions including macular degeneration, glaucoma, and retinal detachments. These problems can threaten vision without warning or symptoms.

optomap can also help your doctor detect serious health problems unrelated to the eye such as diabetes, hypertension, heart disease, some cancers, and auto-immune disorders.

The potential benefits of an optomap exam are priceless.
